Education

Brigham Young University–Idaho, Rexburg, ID Expected July 2027

- B.S. Data Science, GPA 3.4/4.0 · Minor: Business Analytics · General Mathematics Cluster (in progress)
- Associate of Science, April 2026 · Certificate in Data Science, 2026 · Data Science Society member
- Relevant coursework: ETL Pipelines, Database Design and Administration, Statistics, Machine Learning, Business Analytics

Technical and professional skills

- **Programming and analytics:** Python (pandas), SQL, R, Excel/VBA, Tableau, Power BI, statistical analysis, data visualization
- **Data engineering and systems:** ETL/ELT, Apache Airflow, Docker, Snowflake, MongoDB, APIs, relational modeling, data validation
- **Database skills:** joins, subqueries, normalization, schema design, database administration, user and schema permissions
- **Professional strengths:** process improvement, stakeholder reporting, technical documentation, independent troubleshooting, team leadership, HIPAA-compliant operations, conversational Spanish

Professional experience

Special Projects Manager Mar 2023 – Present

Family Psychological Services, Agoura Hills, CA (Hybrid)

- Built a repeatable monthly ETL and reporting workflow with Excel/VBA and Python/pandas. It cleans and consolidates 48 CRM CSVs (~480,000 historical rows) plus ~10,000 new records per month, and it cut preparation time from 45 to 10 minutes (78%).
- Standardized service values, names, dates, and data types, reconciled row counts and totals against source reports, and removed the ~20% of records that were non-patient schedule blocks and would have distorted productivity metrics.
- Delivered Tableau and Excel reporting covering 15 clinicians, 5 services, and 2 locations, which helped leadership identify the highest-grossing and most frequently delivered services.
- Supported about 10 patients per in-person day in a HIPAA-compliant setting. Built 3 protected Excel test forms with VBA macros, automatic scoring, data validation, and conditional formatting.

Missionary / IT Lead May 2021 – Mar 2023

The Church of Jesus Christ of Latter-day Saints, Mexico City, Mexico

- Collected and summarized phone-usage and Facebook performance data so leadership could improve time allocation, resource use, and digital communication.
- Led a 4-person digital content team serving the southern half of Mexico City, and collaborated with diverse stakeholders in Spanish.

Technical projects and coursework

Stock Market ML Pipeline: ETL Component Apr 2024

BYU–Idaho ETL Pipelines course, individual 10-week project · Project write-up

- Built a local ETL workflow that extracted Open-Meteo weather data, MongoDB stock data, and news data, then wrote pandas transformations to normalize the sources and engineer sentiment values for downstream modeling.
- Adapted course templates for the Airflow DAGs, Docker services, and Snowflake loading. Wrote the transformation logic independently and completed the API extraction code with faculty guidance.
- Fixed container startup and scheduling failures using active-container checks, Airflow logs, and YAML configuration, then loaded the integrated dataset into Snowflake.

Database Design and Administration

BYU–Idaho coursework

- Designed relational databases from scratch and reverse-engineered existing schemas into data models, normalizing them to 3NF.
- Queried relational and CSV-backed datasets with joins, subqueries, and automated queries, and assigned user and schema permissions based on access requirements.
